

A Typical Treatment Session

Microcurrent technology uses gentle electrical stimulation to trigger the body's natural enhancement chemicals at both the cellular and muscular levels.

During a typical treatment session, you recline comfortably while specific frequency signatures are delivered to targeted tissues. The therapist uses electrodes, gloves or pads to direct the currents over the affected areas to facilitate conduction. The treatments are painless and relaxing. Many clients fall asleep. A treatment course typically involves several sessions, and benefits accrue over time. Microcurrent therapy is safe, and has no significant adverse effects.

Note: It is important to be well-hydrated before and after treatment. Be sure to drink plenty of water while undergoing this therapy. After completing a series, improvement can last six months to a year, based on the individuals aging process. A maintenance treatment is recommended every four to six weeks, to optimally maintain results.
